2015 DRILL CAMPAIGN IDENTIFIES LARGE NEW TARGET AREA

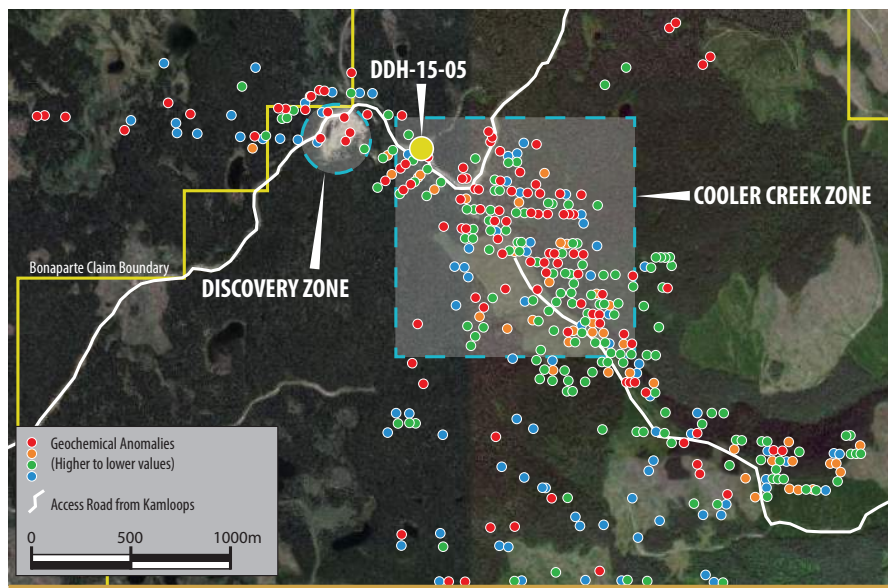

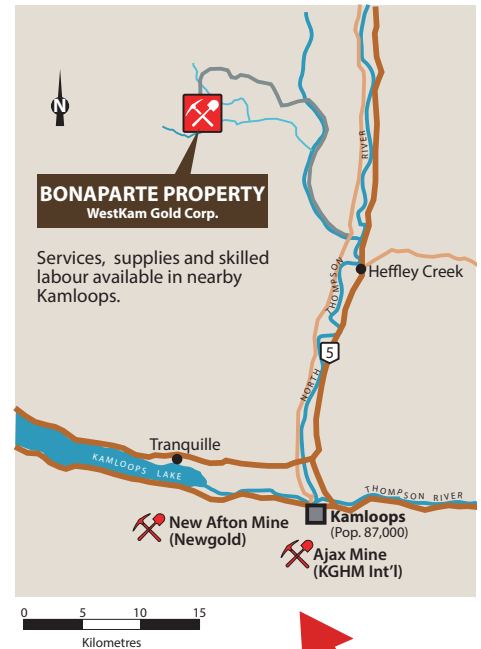

Highlights of This Update

1. Fall 2015 drill campaign accomplishes key objectives
2. New Cooler Creek Zone identified 200m east of Discovery Zone
3. Large zone measures 1.2 km north-south and 1.2 km east-west
4. First drilling ever conducted outside of the Discovery Zone supports earlier premise of extensive parallel veins and zones
5. New zone, combined with other data and results, creates large land play at Bonaparte

To Our Shareholders:

The 2015 drill exploration program at the 100%-owned Bonaparte gold project, located near Kamloops, BC, has identified a large new target area called the Cooler Creek Zone.

The Cooler Creek Zone lies approximately 200 meters from the eastern edge of the Discovery Zone (see map).

The Cooler Creek Zone has been traced by geophysics and soil geochemistry for approximately 1.2 kms north-south and 1.2 kms east-west.

WestKam Gold's Bonaparte Property lies just 50 kms from Kamloops, BC on well-maintained gravel roads. The project is on trend with the New Afton and Ajax mines (shown above) and Teck's Highland Valley Mine, located approximately 40 kms SSE of New Afton.

Drilling the Cooler Creek Zone

Diamond drilling helped identify the Cooler Creek Zone. In particular, hole DDH-15-05, located roughly 500 metres east of the Crow/Grey Jay/Owl veins of the Discovery Zone, encountered veins in granodiorite with the same type of mineralization as the Discovery Zone. The hole assayed 7.88 g/t Gold, (0.253 oz/t Gold), 38.4 g/t Silver, 0.33% Copper and 28.6 g/t Tellurium over 1.0 meters. Holes 15-06 and 15-07 encountered similar structure, although with lower grades.

Area of drilling on the new Cooler Creek Zone, which lies about 450 metres east of the area of historical bulk sampling on the Discovery Zone.

Getting Value from our Drilling Budget

With an exploration budget of less than \$100,000, we were able to drill seven holes, obtain extremely valuable information and move the project ahead significantly. This unusual success was due both to the diligence of our geological crew and the very efficient work by the drillers.

Four holes, totalling 306 metres, were completed in the Discovery Zone.

Three additional holes, totalling 277 metres, were drilled outside of the Discovery Zone.

The program was planned, monitored and analyzed by Coast Mountain Geological.

Looking Ahead to 2016

Dependent upon financing, we are planning to conduct a Phase II work program, to consist primarily of drilling, for the 2016 season. This work will follow up on results of the 2015 drill exploration and also previous geochemical and geophysical programs.
